### **Abstract:**

*Humans are considering most intelligent in the world. Through his intelligence he Innovated lots of things. Human made revolution in computerized world. Recently the innovation of artificial intelligence (AI) so life made easy. AI rapidly takes control over every aspect of life of an intelligent human. Not only human life as well as literature because it is an essential form of imagination and creativity of human expression. The fast growth of AI rebuilt essential questions in literary studies; can literature create without human sentience? As, AI creativity in Literature lots of AI- assisted writing tools creating any type of literature. Moreover, it analyzes interprets, expressions through machine language. AI can give new idea for writing. Present research paper examines whether such developments represent actual literary Creativity or a technological Reproduction of human expression. AI introduces both opportunity and challenges in authorship. From the contemporary literary theory of creativity and authorship the study disputes that literature not just a piece of written paper, it's pondering of society day today experiences of human life, awareness, depth of sentences and morality. Although AI can create artistic motifs and chronicle structure with emotional touch, it is the absence of the depth of human fillings, awareness of human mind and expressions, social responsibility. The sum of this research paper AI should be considered as helpful and creative tool that gives modification of human imagination in the digital age, rather than not an independent literary author.*

## Introduction

Literature is not nearly a piece of written paper, but it is sheds light on various aspect of human life literature. Is a record of history shaped by humanities individuals and Cultural experiences. from ancient epics to modern experimental narrative, writing, explorers the death of human imagination and complexities of life.

Nowadays, Literature to be entering a different field, Artificial intelligence, which is essential in science now it's creating literature. AI's rapids existence creative writing elevates major question About Originality, Authorship or meaning. Can a machine create a poem or story that looks Expressive, does these oppositions the

traditions of literary intentions as a compassionate art? But literature required qualities such as emotional awareness, ethical responsibility, and intentional meaning; these qualities can be simulated, but not fully replicated in human sense.

AI can express emotions in Literature so emotional awareness is represented not truly possessed. AI can create texts similar to literature. AI cannot feel emotions and not take moral responsibility for Idea. Its writing comes from pattern prediction.

## Creativity and human experience

Creativity has typically been known as particularly

human dimensions rooted in imagination, emotions and Lived experiences. Authors modify in individual recollection, socio-cultural contents and emotional struggle into literacy form. He allows readers to connect with unknown perspectives. Modern theories of creativity as know that creative acts often come out to conversation with historic and live texts.

AI created writing work inside this conversational structure by examining and merging live literature design. However AI generator such work possibly finishing feel real but they there absence of intentional feelings and basic aim that define human imagination. When a human writer writes any literary work, he knows the purpose and need of writing. an AI tools can only predicts the words according to the data based pattern.

### **AI and Creative Writing application**

Nowadays, AI created writing has expanded regularly in literary research, Education and digital publication. Writers use AI tools to create ideas, searching for different ways to narration or conquer creative blocks. These methods indicates how writing is created rather than who control over creative writings.

Even if AI can create expressive and linguistically agreeing text, it does not have its own its own understanding about meaning or significance. The human writer takes their responsibility about choosing, editing and clarifying created material. Outcome about AI its only creative tools rather than an independent author. AI's part in creative writing very helpful for writer, instead of alternative. Its work process depends on the data algorithm.

### **Authorship and responsibility**

Authorship in literature has constantly engaged responsibility as well as creativity. Writers are responsible for the meaning of what they created and the societal and moral principal suggestions of their works. AI Can create text or writing but absence of responsibility and ethical values. True traditional ideas come from the author, but AI creation has no longer equal intention AI can modify the procedure of writing but does not take place of human. The author is an illustrative essence who gives moral and purpose to the literature. The author uses his creativity, originality and intention while he creates

content and meaning.

### **Moral and cultural involvement**

The Rapid uses of AI in creative writing lift the moral concern about originality, clarity and educational honesty, While, AI absence of moral values.

Its moral and cultural impact depends on human choices about design, guided structure and social responsibility. AI is not partial in cultural collaboration. AI Don't has emotions as well as moral principles than human's .Through data, design and deployment its encoded culture. AI motivates and help Scholars and authors to creating, examine and explain literature. AI must be used impartially. It's not harmful and biased.

### **Conclusion:**

Can machines right literature? The question eventually disclose the enduring the importance of human creativity. Even through AI can create text by imitate of writing form and style but absence of emotional intention, Proper meaning and moral responsibility. Thus AI creativity is influential rather than genuine. It is work as extension of human creativity rather than replacing human. Blending of AI in the creative writing future may transform the field. AI has lots of benefits and also disadvantage. It has become an important device in creative writing. Furthermore it an expert in creating poems, stories and literary works. This skill of AI is depends on algorithm, existing language and cultural traditions. Through AI creative writing can upgraded but unable to restore of human artistic intellect. In future literary authorship lies not machine but in human guided creativity.
